OCTOBER 25, 2016 | 6 PM

**WESTERN MIDDLE SCHOOL
2201 WEST MAIN STREET | LOUISVILLE, KY 40212**

Construction is set to begin for Phase 2 of the Portland Green Infrastructure Project. This project—which captures stormwater from the 145-acre CSO 190 sewershed—will relieve sewer overflows into the Ohio River, west of downtown. Phase 2 green infrastructure will be installed at several sites within an area bounded to the south by Jefferson Steet, to the north by Portland Avenue, to the west by 18th Street and on the east by 15th Street. Curb inlets at the intersections will direct rainwater to planting areas and underground trenches, which will allow for absorption of the rainwater deep into the ground. When all phases are complete, this initiative will prevent more than 32 million gallons of sewer overflow from exiting the combined sewer system at CSO 190 in a typical rainfall year.
